Materials used in contact with foodstuff

The requirements of “Technical Guide on Metals and alloys used in food contact materials, CoE (2013)” are fulfilled.

Migrations tests have been made according to following standards:

- DIN EN 13130-1:
Guide to test methods of material and articles in contact with foodstuff
- DIN EN ISO 17294-2, DIN EN ISO 11885 (E22) + DIN EN ISO 17852 (E 35):
Methods for determination of chemical elements

The tests showed that migration of following chemical elements were below the limits of determination:

- Aluminium, Antimony, Arsenic, Barium, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Lithium, Manganese, Mercury, Molybdenum, Nickel, Silver, Thallium, Tin, Titanium, Vanadium, Zinc.
